

DOOR ASSEMBLY

5

ABSTRACT

The invention relates to a set of doors for closing off a bay (6) in a wall (4), comprising a first flexible door (1) and a second door (2) having at least a rigid bottom edge (17), it being possible to impart an upward movement and a downward movement to each of these doors (1, 2) respectively into an open position and a closed position, the second door (2) being disposed so as to create a slit (31) between the wall (4) and the rigid bottom edge (17) of this second door (2) as it is moved upwards into the open position. The flexible door (1) is disposed at least partially between said second door (2) and said wall (4) and can be displaced through said slit (31) between its closed position and its open position when the second door (2) is in the open position.

(54) Title: DOOR ASSEMBLY

(54) Titre : ENSEMBLE DE PORTES

(57) Abstract: The invention concerns a door assembly for closing an opening (3) in a wall (4), comprising a first flexible door (17) and a second door (2) having at least a rigid lower edge (17), each of said doors (1, 2) being capable of being subjected to a rising movement and a lowering movement respectively between an opening position and a closing position, the second door (2) being designed to create a slot (31) between the wall (4) and the rigid lower edge (17) of said second door (2) during its rising movement towards the opening position. The flexible door (1) is arranged at least partly between said second door (2) and said wall (4) and can move through said slot (31) between its closing position and its opening position when the second door (2) is in the opening position.
